

Surge diverter

Surge diverter

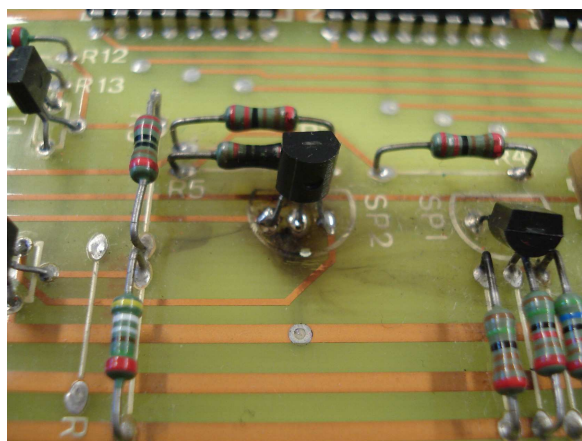

In unstable power grids with current interruptions and voltage fluctuations there is a danger of electronic components being damaged by power peaks. To prevent this, there is the possibility of installing a surge diverter.

The high design voltage of this surge diverter enables the device to be used worldwide in all 230V/400V ... 240V/415V power supply grids.

The solution can be used for all our model ranges and, while meeting highest expectations as regards performance and convenience, doesn't require a major effort.
